**Senior Medication Assistant**

**What Is This Demo:**
Many seniors need to take multiple medications per day. Keeping track of each medication and knowing when to take each one can be challenging. Medicine names and medical terminology can be hard to remember!

Our project is a smartphone app that helps seniors with managing and taking their medications.

**How It Works:**

1. **Scan the barcode on the medicine**
2. **Fetch information and prescription from database**
3. **Organize information and send back to phone**
4. **Display medication plan**

**Advantages:**
Our app helps seniors to keep track of which medication to take and for what purpose. This helps compliance with the prescribed medication plan.

**Lessons Learned:**
We’re working on gaining access to pharmacies’ databases to better display information.

**Try It:**
Scan the code on the bottle and see what you get!
